Wheat (*Triticum aestivum* L.) belonging to poaceae family is the second largest and most important food crop after rice among cereal crops (Malav *et al.*, 2017). About 35% of world population is dependent on wheat crop as staple food and two-third of the global wheat production is used to accomplish dietary needs of humans (Grote *et al.*, 2021) due to its better composition including carbohydrates, fats, protein, fiber, zinc, calcium, and vitamins (Iрге, 2017). Globally, it was grown on an area of 222.11 million hectares with 779.76 million tons production (USDA, 2021-22). Pakistan is the 7th largest wheat producing country with 3.38% share in global wheat production during growing year 2021-22 (USDA, 2021-22). Pakistan is the 4th largest country population wise and stands second among fastest growing populations with 3.60% growth rate in South Asia. Therefore, it is challenging to secure the food supplies for fast growing population and self-sufficiency in wheat production has been a core objective of Pakistan.

During the last years 2020-21, wheat was grown on an area of 9.168 million hectares with 27.464 million tons with average yield of 2.99 tons per hectare. However, area under wheat cultivation decreased to 8.976 million hectares with 26.394 million tons with average yield of 2.94 tons per hectare. In addition, wheat contribution also showed decreasing trend in share in gross domestic product (GDP) and agriculture value addition; 1.8% share in GDP during both years and 9.2% and 7.8% share in agriculture value addition in 2020-21 and 2021-22, respectively. Wheat crop has been grown on 8.40 million hectares area against target area of 9.3 million hectares according to report released by United States Department of Agriculture. This cultivated area would provide 26.4 million tons wheat production against target production of 28.4 million tons during 2022-23. Punjab is the largest wheat producing province of Pakistan where wheat crop has been sown on 16.48 million acres. This survey of the last two years indicates a decline in the wheat yield per hectare which is a serious concern to achieve food security in Pakistan. The yield decreasing factors including weather variations, sowing date, poor seed quality, irrigation plan, pest/disease attack, type and shortfall of fertilizers and pesticides, and climate change particularly drought and heat stress (Shafi *et al.*, 2022). In addition to these factors, traditional farming practices are used in Pakistan which also results in the loss of wheat production. In order to multiply the wheat yield, there is need to utilize modern farming practices which help the farmers to optimize their agricultural inputs at the farm level in appropriate time.

Although the potential yield of wheat is 7-8 tons ha⁻¹ depending upon type of cultivars, climate and crop management practices, wheat yield per hectare is very low in Pakistan (2.94 tons ha⁻¹) as compared to other top wheat producing countries such as Canada (7.81 tons ha⁻¹), China (5.81 tons ha⁻¹), India (3.52 tons ha⁻¹) and Argentina (3.44 tons ha⁻¹), Egypt (6.43 tons ha⁻¹). This yield gap is interconnected with different factors including climate change induced extremes particularly drought and heat stress, rust attack as well as poor seed quality (GOP, 2021-22; USDA, 2021-22; Javed *et al.*, 2022; Munawar *et al.*, 2022; Ali *et al.*, 2022).

Among climate change induced extremes, drought stress is a major threat to the sustainable agricultural productivity in the arid and semi-arid regions of the world (Rahman *et al.*, 2022). About 19-50% losses have been reported due to drought stress worldwide (Khayatnezhad and Gholamin, 2020). Since, major part of Pakistan comes under arid and semi-arid climate as approximately 60% land area of country receives 250 mm annual rainfall, and 24% land area of the country receives 250-500 mm annual rainfall (Raza *et al.*, 2019). Thus, drought stress is also major threat to the sustainable wheat production in Pakistan and about 17-70% losses have been reported due to drought stress (Ahmed *et al.*, 2022). During 2021-22, heat stress severely wheat crop and led to major yield gap in Pakistan. Wheat rust is becoming issue to the wheat production which can reduce yield upto 30% and even destroy whole crop within months after its first attack (Shafi *et al.*, 2022). It also severely decreased the wheat yield during growing season 2019-20. Thus, the cultivation of rust resistant cultivars and fungicide treated seeds could be viable approach to prevent the rust attack and its losses.

Therefore, such problem needs to be addressed with the use of modern technologies such as early forecasting models. These forecasting models have great potential to predict the future climate scenarios and have been successfully applied to forecast yield in response to different weather, soil and climatic conditions in Pakistan. In addition, the students' power and scientific community of different research institutes can be obliged to boost up agricultural productivity of the country. Students can play a crucial role in educating and training the farmers for the problems and related recent advancements. This manpower can be expanded in groups to meet each farmer personally to collect data about the problems being faced by the grower's communities. These problems can be discussed with the experts and/or scientists at their institutes. The scientific problems can be solved by executing proper experimentation in the laboratories and results can again be disseminated through students. Along with this students can also guide farmers about selection of certified seed, their optimum sowing time, fertilizers management, irrigation scheduling and best crop management practices and application of synthetic inputs. To deal with wheat production under changing climatic scenarios is not an easy job because most of the workers/farmers engaged in wheat production have limited knowledge of wheat production and crop management practices as per crop requirements. Moreover, the government extension workers or agriculture experts cannot reach and guide each farmer due to limited resources.

Main objectives of the wheat campaign i) to meet the target area and production (9.3 million hectares 28.4 million tone, respectively of wheat crop and ii) to increase the 2 maund per acre average yield of the wheat crop during the growing season 2022-23

Keeping in view this situation, Agriculture Department, Govt. of the Punjab decided to engage agriculture students for wheat campaign during wheat season 2022-23.

The following universities participated in wheat campaign 2022-23:

1. MNS University of Agriculture, Multan
2. Bahauddin Zakariya University, Multan
3. Bahauddin Zakariya University, Bahadur Sub Campus Layyah
4. Ghazi University, Dera Ghazi Khan
5. Khawaja Fareed University of Engineering & Information Technology
6. The Islamia University, Bahawalpur

The MNS University of Agriculture, Multan was given the main role to coordinate other universities because this university is the most fast growing university in south Punjab. MNS University of Agriculture, Multan organizes farmers' days and seminars on routinely basis. The purpose of this wheat campaign was to promote the vision of Pakistan i.e. to grow, promote and learn. On the other hand, this will also enable the students to learn practical field knowledge of economically important crops such as wheat.

The first meeting was held in Academic Block, Seminar Hall No#110 at MNS University of Agriculture, Multan under the chair of Director General Agriculture Extension Punjab on 01.11.2022 in which respective Deans/Focal Persons of universities and Directors/Deputy Directors of Agriculture Extension participated. In this meeting, following ToRs were finalized:

1. The students will be given one day training by experts from respective universities about modern wheat production technology and other related issues.
2. The students will be deployed in their respective union council near to their houses.
3. The MNS University of Agriculture, Multan will create a web-portal link to mark students' attendance and upload farmers' field data. In this regard, MNSUAM will also arrange orientation session to guide students about how to mark attendance and fill wheat detail online.

Figure 1: Initial training of the students for wehat campaign by and Dean of faculty of Agriculture and Environmental Sciences, MNS University of Agriculture, Multan

4. The Agriculture Extension will arrange one-day orientation session for the students at each tehsil level for login, filling online form and reporting on web portal.
5. The students' activity will be monitored through web portal created by IT team of MNS University of Agriculture, Multan.
6. The field monitoring of students will be done by the officials of their respective universities and officers of Agriculture Extension Department at Tehsil level. In addition to physical monitoring, web-portal based online monitoring will also be done. The universities will share names of monitoring officers to monitor students' activities via web-portal.
7. The web portal account of Focal Persons/Monitoring Officer will be created by the MNSUA Multan
8. Each student has to complete 20 working days in wheat campaign based on web portal based attendance. The 20 working days can be completed during the wheat season 2022 until commencement of regular semester.
9. The students' attendance report will be created and shared to the nominated coordinators of the universities on daily basis. The universities will motivate and encourage their students for active participation in wheat campaign.
10. Each student will visit 3-5 farmers daily and submit visit detail on web portal.
11. Certificates will be awarded to the participating students by the Director General Agriculture Extension & Adaptive Research, Punjab.
12. The joint activities like Seminar/Awareness Walks, Farmer Meetings will be organized by the universities and Extension Department.

Pre-Training of Students for Wheat Campaign

- As per decision in 1st meeting, the students were given one day pre-training in universities by the experts from the university and agriculture extension at least one week before the start of campaign. The contents of the training include:
- The main theme of the pre-training of students was to provide detail information regarding selection of suitable potential wheat varieties for a particular area and their optimum sowing time.
- Complete Production Technology of wheat containing, soil preparation, area wise potential varieties, fertilizer requirements, intercultural operations, optimum sowing time, irrigation scheduling, harvesting etc.
- Identification of weeds and their management in wheat crop
- Identification of wheat diseases particularly rust and their management.

Thus, the purpose of these trainings was to refresh the knowledge of students so that they can properly guide the farmers.

Figure 2: Training of students at different universities.

The focal persons of the wheat campaign were the respective Deans of Agriculture Faculty of each participating university. In addition to this, Dean/focal persons nominated following Coordinators of the Universities for further coordination regarding wheat campaign. The MNSUAM team created whatsapp group of coordinators and focal persons along with Divisional, District and Tehsil level officials (Director/Deputy Director and Assistant Director) of Agriculture Extension Department for dissemination of information and activities as shown in Table 1.

Table 1: List of Coordinators of the universities for wheat campaign

Sr. No.	Name of Coordinator/Focal Persons	Name of University
1	Prof. Dr. Shafqat Saeed Dean, Faculty of Agriculture & Environmental Sciences (For overall coordination with coordinators of other universities)	MNS University of Agriculture Multan
2.	Prof. Dr. Abdul Khaliq & Prof. Dr. Sajid Nadeem	University of Agriculture, Faisalabad
3	Dr. Shabbir Hussain	BZ University, Multan
4	Dr. Abdul Hanan	Ghazi University, DG Khan
5	Dr. Saqlain Zaheer	Khawaja Fareed University of Engineering & Information Technology, Rahim Yar Khan
6	Prof. Dr. Muhammad Iqbal Bandesha Dean, Faculty of Agriculture	Islamia University of Bahawalpur

As per decision in 1st meeting, the university focal persons/coordinators nominated faculty members as Monitoring Officers for monitoring students at Tehsil Level. The IT team of MNS University of Agriculture, Multan created the web-portal based login accounts and allotted them students in each tehsil for monitoring.

There were a total of 64 Monitoring officers from the universities and more than 90 monitoring officers from the Department of Agriculture Extension. The tehsil wise detail of university faculty members and officials of Agriculture Extension Department for monitoring is given as Annexure 1.

The logins of each student and monitoring officer from the universities and Agriculture Extension Department were created and shared by the IT team of MNS University of Agriculture, Multan. In this regard, an online training of students and monitoring officers was organized by MNSUAM in which a detailed tutorial was given to the students about login procedure and data input. The step by step procedure was also shared in whatsapp group for further guidance about the web-portal.

Placement of Students in Different Tehsils

There were 1250 students with 918 male and 332 female students belonging to 18 districts and 33 Tehsils of Punjab Province. The detailed tehsil wise placement of male and female students is given in Table 2. The final numbers of students of each university is given in Table 2. The Tehsil wise placement of male student of each university is given as Annexure 1.

Table 2: Numbers of total students (male and female) involved in wheat campaign

Sr. No.	Name of University	Total Male Registered Students
1	MNS University of Agriculture, Multan	313
2	Bahauddin Zakariya University, Multan	280
3	Bahauddin Zakariya University, Bahadur Sub Campus Layyah	105
4	Ghazi University, Dera Ghazi Khan	210
5	Khawaja Fareed University of Engineering & Information Technology	85
6	The Islamia University, Bahawalpur	92
Total		1250

The students were monitored through web-portal based activity by IT team of MNS University of Agriculture, Multan as well as by the university itself and agriculture extension department on daily basis. The university teams also visited the students in field to see their activities and farmers' guidance. The students' attendance was reported to university coordinators on daily basis. The students were also advised to report their activities to their respective agriculture extension office on daily basis.

Guidance of Farmers and Provision of Wheat Seed

The farmers were in close contact with the students and university experts to discuss their issues related to wheat for proper guidance to the farmers. Moreover, the officials of Agriculture Extension Department regularly visited the students in field and guided the students for wheat problems and their solutions. The university faculty also visited their students and guided them about the wheat problems particularly related to sowing time and sowing methods and their solution.

Figure 3: Guidance of the farmers and provision of wheat seed by MNS university of Agriculture, Multan.

For wheat campaign, problem based regular awareness walks, seminars and webinars were conducted by the universities and Agriculture Extension Department. The purpose was to create awareness and guide the students and farmers about the current issues and problems of wheat along with their possible solutions

پروفیسر ڈاکٹر آصف علی (تمغہ امتیاز)، رئیس جامعہ زرعہ ملتان
گندم کی پیداوار میں پائیدار اضافے کے لیے منعقدہ کسان کنونشن
میں آپ کو بھرپور شرکت کی پر خلوص دعوت دیتے ہیں

متنقی شرکت: پروفیسر ڈاکٹر شفقت سعید، ڈین، کلیہ زراعت اور ماحولیاتی سائنسز (03006358432)
ڈاکٹر عبدالغفار، چیئر مین شعبہ فلاحت (03027506327)

Figure 4: The webinar/seminar conducted by the universities

Figure 5: The webinar/seminar conducted by the universities/Agriculture Extension Department

The students of MNS University of Agriculture Multan, University of Agriculture Faisalabad, Bahauddin Zakariya University, Multan and Khawaja Fareed University of Engineering & Information Technology, Ghazi University DG Khan and Islamia University Bahawalpur started wheat campaign on 01.11.2022. The students' attendance was shared to their respective universities on daily basis. The overall university wise attendance percentage of the students till 20.11.2022 is given in table 3. However, the detailed university wise attendance (No. of field days) and total forms submitted by each student is given in annexure 4.

The table 3 shows that more than half of the students (53%) of B.Z. University did not joined the wheat campaign and the highest percentage of students of Ghazi University, Dera Ghazi Khan (61%) and Khawaja Fareed University of Engineering and Information Technology (39%) completed only 1-7 days in the wheat field. In comparison to the students of other universities, the maximum percentage of MNSUAM students completed 30 field days in wheat campaign while none of the student of Ghazi University completed 30 working days.

The numbers of data forms submitted by students of different universities are also given in Table 3. The maximum numbers of forms were submitted by MNSUAM students while none of the IUB student submitted data form via web portal.

University wise attendance male students

Table 3: University wise attendance male students recorded via web-portal during wheat campaign

Name of University	Total Students	0 Day	1-4 Days	5-8 Days	9-12 Days	13-16 Days	17-20 Days	Total Forms Submitted
MNS University of Agriculture, Multan	313	0	231	247	235	241	220	14120
B.Z. University, Multan	280	0	98	108	19	13	49	4560
B.Z. University, Bahadur Sub Campus Layyah	105	0	71	16	19	13	49	1025
Khawaja Fareed University of Engineering & Information Technology	85	0	4	4	7	10	3	890
Ghazi University, DG Khan	210	0	32	32	3	0	5	1075
Islamia University, Bahawalpur	92	0	0	0	0	0	0	0
Total	1250	0	436	407	283	277	326	21,670

Note: Islamia University, Bahawalpur did not use the web-portal ID, the record was maintained manually
